

Merlinus Liberatus.

BEING AN

ALMANACK

For the Year of our Redemption,

1 7 7 9.

Being the Third after *Bissexile*, or *Leap Year*;
And from the Creation of the World, according
to the best History, 5726,

And the 90th of our Deliverance by *K. William*,
from Popery and Arbitrary Government;

But the 84th from the

Horrid, Popish, High-Church, Jacobite Plot.

Wherein is contained all Things fitting and useful for such a Work, as
an Ephemeris of the daily Motions of the Planets, with their various
Configurations, Aspects, Conjunctions, Lunations, Eclipses, Astrono-
mical, Astrological, Meteorological Observations, the Rising and Setting
of the Sun, Moon, Planets, and fixed Stars, illustrated with Tables of
the Tides, Terms, and daily Equation of Clocks, Length and Break,
Increase and Decrease of Days, Semidiurnal and Seminocturnal Arches
for several Latitudes, a Chronology, Remarks on the Divisions of the
Heavens, with Judgments of the Eclipses, and also a particular Judg-
ment of a Nativity, handled according to the Rules of the Ptol-
omean Astrology, with many other Things relating to the Truth of
Astrology.

Calculated for the Meridian of *London*,

Whose { Longitude } is { 24 } Degrees { 20 } Minutes.
 { Latitude } { 51 }

By JOHN PARTRIDGE.

— *Etiam Mortuus loquitur.* —

L O N D O N:

Printed for the Company of STATIONERS,
And Sold by GEORGE HAWKINS, at their HALL in
LUDGATE-STREET.

[Price Stitched Eight Pence.

A FURTHER CONTINUATION FROM MY LAST.

NOW Astrology is either meteorological or genethliacal. Of the meteorological I have said already; the genethliacal astrology is depending either upon the birth of some question, or of some native person or thing. Questionary astrology dependeth upon the precise point of time when a serious question is asked, either by letter or word of mouth; and this is called astrology by way of horary questions. Of this way of astrologizing (I must confess) I am not so well skilled, nor am I, of the truth and worth of it, half so confident as of the other way by the birth of persons or things; yet so much have I tried and practised, that I do believe it to be a lawful, true, and beneficial study, although I am still seeking more and farther into the reason of its truth, in order to attain a satisfaction beyond what I have yet gotten. But in order that I may be the better understood, when I go about to justify this way of astrologizing, who they are, and what practises they are which I undertake to justify, I would have the reader to know, that all men who profess astrology, are not astrologers in good earnest, but that there are many pretenders to this art who understand it not, or not sufficiently at least as they pretend, or else if they do understand it, yet, under colour of astrology, do practice other diabolical arts of magic or sorcery, which are quite different things, and of no kin to astrology.

There are, who go under the name of astrologers, many pretenders so very ignorant that they understand nothing of arithmetic or astronomy, and yet are able to answer questions by way of prognostication, so strangely quick and readily, and yet falling out so punctually right, and truly agreeing to the purpose, even unto admiration. Now this is a sort of astrologizing beyond my reading or experience. And be it so, that such a skill may be compassed, and that lawfully, without either sleathy cheat, or diabolical inspiration in it, I am utterly a stranger to it; and much may be, I confess, beyond my skill, but yet I am jealous, that many of these illiterate fortune-tellers have more understanding in sigils, charms, or
spells,

spells, than in true astrology, and are better read in the juggling art of geomancy, than in the famous art of celestial observations.

It is very certain that some men are naturally constituted of such a kind of divining fancy, that by a kind of luck, more than out of any real skill, they are able to foretell, and tell of many things strangely true. And hence comes it to pass, that many a man drives a trade of discovering lost and stolen goods, and speaks directly where they are by a mere headlong kind of chance, with help of very small or no skill. And this luck holds him some space of time, by fits at least, during the predominancy of prosperous aspects of stars favouring. But then in time those worn out, and as evil stars succeeding them, this luck changes, and skill being wanting to supply the loss of that change, all he says for another while proves as utterly false and erroneous. And hence fails the man's credit, and with him astrology is brought into scorn, whereas in truth the man was little or no astrologer, and never had any quantity of astrological skill in him. After this sort we daily see many sorts of tradesmen and artists buoyed up by their mere luck to become famous, who never were bred up to any thing of what they profess; thus have I known bone-setters, midwives, chirurgeons, and physicians, who never were bred up to any of these things, or any thing like them, yet have been, as it were, forced on by mere nature to follow every man his art, without any instruction but what nature of its own accord hath taught them to acquire, and yet notwithstanding have grown famous in their professions unto admiration.

Now where men have so much grace or ingenuity as to back their good fortune with industry, it comes to pass, that they acquire good arts, grow truly famous, and deserve to be so esteemed.

(To be continued in my next.)

A Table of the Moon's Age for every Day throughout this present Year 1779. Whereby, with the Help of the next general Tide-Table, the Time of High Water at all the Places above-mentioned in it, are shewn by Inspection.

An Explanation of this and the following Table.

First find the Month in the Head of the Table, and the Day in the first Column on the left Hand, and in the Angle of Meeting you have the Day of the Moon's Age, with which enter the following Table, and find your said Number in the left Hand Column, and over against it in the other Columns is the Time of High Water at all the Places above-mentioned, by Inspection.

Example, January the 27th, I find the Moon to be 11 Days old, and over-against 11 in the first Col. I find 11 Hours 48 Min. in the second Col. 10h. 18' in the third, which is the Time of High Water at all those Places mentioned above in the 2d and 3d Columns. Et sic de ceteris

A Table of Terms and Returns, for the Year of our Lord 1779.

Hilary Term begins Jan. 23, ends Feb. 12.

Returns or Effoign Days.		Exc.	Ret.	App.	W. D.
In eight Days of St. Hilary,	Jan. 20	21	22	23	Saturd.
From the Day of St. Hilary in 15 Days,	27	28	29	30	Saturd.
On the Morrow of Purif. of bl. V. Mary, Feb. 3	4	5	6		Saturd.
In eight Days of the Purif. of bl. V. Mary,	9	10	11	12	Friday

Easter Term begins April 21, ends May 17.

From the Day of Easter in 15 Days,	April 18	19	20	21	Wednes.
From the Day of Easter in 3 Weeks,	25	26	27	28	Wednes.
From the Day of Easter in 1 Month,	May 2	3	4	5	Wednes.
From the Day of Easter in 5 Weeks,	9	10	11	12	Wednes.
On the Morrow of the Ascension,	14	15	16	17	Monday

Trinity Term begins June 4, ends June 23.

On the Morrow of the holy Trinity,	May 31	J. 1	2	4	Friday
In eight Days of the holy Trinity,	June 6	7	8	9	Wednes.
From the Day of the holy Trinity in 15 Days,	13	14	15	16	Wednes.
From the Day of the holy Trinity in 3 Weeks,	20	21	22	23	Wednes.

Michaelmas Term begins Nov. 6, ends Nov. 29.

On the Morrow of All Souls,	Nov. 3	4	5	6	Saturd.
On the Morrow of St. Martin,	12	13	15	16	Tuesday
In eight Days of St. Martin,	18	19	20	22	Monday
From the Day of St. Martin, in fifteen Days	25	26	27	29	Monday

N. B. No Sittings in Westminster-Hall on Ascension-Day, Midsummer-Day, and the 2d of February.

The *Exchequer* opens eight Days before any Term begins, except *Trinity*, before which it opens but four Days.

Note, That the first and last Days of every Term are the first and last Days of Appearance.

'Tis sacred Justice, and Life's Guardian, Law,
Protects the Good, and keeps the Bad in awe.
If any do by Craft abuse the same,
The Men, not the Profession, are too blame.
Let us be honest, study Love and Peace,
The Lawyers soon will find their Fees decrease.

January hath XXXI Days.

Should I Urania court with humble Bow,
To open her Cabinet of Wisdom's Store,
I fear her Contempt of my aged Brow,
And her Disdain may closter shut the Door.
My shaking, trembling Hand, tho' much afraid,
Ventures once more without the Muses' Aid.

February hath XXVIII. Days.

Canst thou the Order of Celestials find,
 Or canst thou tell how every Planet wind?
 When each is retrograde, and when direct,
 Their Aspects to each other and effect?
 Canst trace the endless Motion of each Sphere,
 Or know the Variety of each circling Year?

March hath XXXI Days.

Know'st thou the various Constellations shine,
 (As reflex Glories of the Power Divine.)
 But greater Virtues of the Erraticks flow,
 Whole several Names and Orders thus we know:
 Saturn, Iove, Mars, next Heaven's bright Eye the Sun,
 Next Venus, Mercury, and the changing Moon.

April hath XXX Days.

Know it thou the Planets in their Ranges take,
And pass the Signs, which in the Zodiac
Are Aries, Taurus, and the resembling Twin,
The slow-paced Crab, the Lion, and Virgin,
The Ballance, Scorpion, Bow-man next appear,
The Goat, Aquary, and Pisces in the Rear.

D	☉	☿	♈	♀	♊	♋	toofast	South	& sets	
1	14			Δ	8		3 59	0 3	D rite	The configurations of the planets are for the most part favourable this month, which may animate the most serious sort of men to be active in composing such differences which about this time want regulation. Good news from several parts of Christendom arrives to England about this time, and the happy return of some long expected ships doth not a little rejoice their dejected owners. God direct all pestilential diseases from us this summer, and then there is no doubt but the city of London, and her numerous inhabitants, shall flourish in their trade and commerce to their great satisfaction.

J U N E hath XXX Days.

If thus far thou can'st see into this Art,
 Know that twelve Houses do the Heavens part :
 The First, Fourth, Seventh, and Tenth we Angles call;
 Second, Fifth, Eighth, and Eleventh, Succedents all;
 The Third, Sixth, Ninth, & Twelfth, they Cadents be,
 And what these signify you next shall see.

OCTOBER hath XXXI Days.

The Mobile are governed by the Moon,
 Whole humours suit her, and will change as soon :
 Mercury supplies us with rich Eloquence,
 And inspires Praters with Impertinence :
 You that know this may see, strange are the Crimes
 Of some ; stranger the Turnings of the Times.

1	4		4	8		□	10 36	4 25	8 A 42	The Configuration of this Month are various & many, but the most notable is the famous Square of Jupiter and Mars from cardinal Signs, the Effects whereof will be seen in the Actions & Passions of Man. I mean such as are subject to the Signs, where in the aspect is made & the Places under them; for the Effects do not much concern England; only some particular Persons therein. Perhaps there may be Strifes and Contentions among some of the higher Rank, which a little Time may make manifest. News from foreign Parts and such as is good and acceptable.

DECEMBER hath XXXI Days.

From every crying epidemick Sin,
Which mars our blessings, and casts poison in ;
From God's avenging hand that can destroy us ;
From every thing that's tending to annoy us ;
From every Mischief, and mischievous Men,
Good Lord deliver us all every one, Amen.

N. B. In the Kalendar Part you will find the Planets South-
ing inserted to several Days in each Month; and by this
Table you may easily find their Rising and Setting: First
find the Longitude for the Day proposed, with which enter
this Table, and take out the Semidiurnal Arch thereof,
which being added to the Time of Southing, gives the
Setting, but subtracted the Rising.

P A R T R I D G E, 1779.

Of the ECLIPSES that will happen in the Year 1779.

FIVE times to the inhabitants of this Earthly Globe, will the two great Luminaries of Heaven be deprived from their sight; three times the Sun, and twice the Moon, as they were calculated and sent to me by my astronomical friend, Mr. Henry Andrews, teacher of the mathematics at Royston in Herts, with whom youth are boarded, and made fit for business: He also makes barometers and thermometers.

The first is a Solar Eclipse, and happens on Sunday, the 16th of May, at 6 minutes past one o'clock in the morning, therefore invisible to us.

The second is a total Eclipse of the Moon, and is visible (in part) to us in Great Britain. It falls on Trinity Sunday, the 30th day of May. It will begin (under the Meridian of London) at 2 min. past 3 o'clock in the morning, and the Moon sets about 7 min. before 4, with near three parts of her disk shaded to the right hand. The Moon will be more or less eclipsed at setting, according as places are situated either to the east or west of the Meridian of London; for the total darkness will begin (with respect to the said Meridian) at 13 min. after 4 o'clock, solar time.

MOON.

SUN.

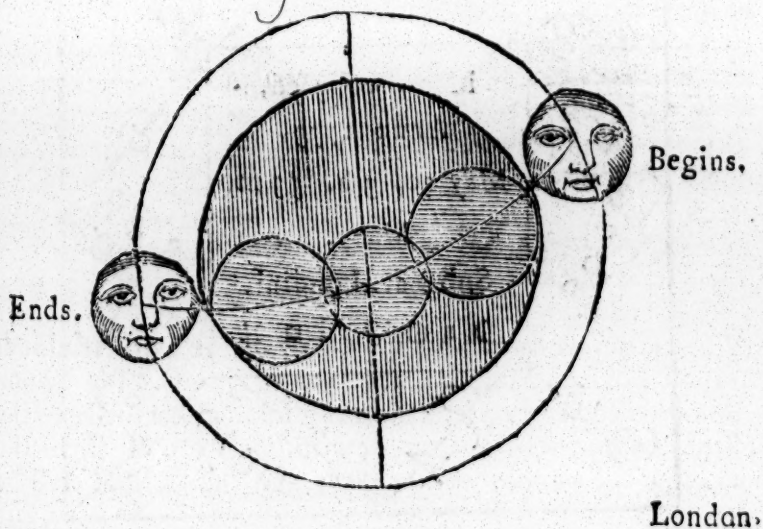

The third is a small visible Eclipse of the Sun (if clouds interpose not) on Monday, the 14th of June. The Moon will make the first impression on the solar disk a little to the west of the Sun's vertex, at 19 min. past 7 o'clock in the morning; the middle will be at 8, and the Eclipse will be quite

P A R T R I D G E, 1779.

quite over at 17 min. before 9 at London, solar time. The Sun will be shaded 3 digits or more on his upper limb, a little to the east, as appears by the type, which is adapted to London, and will very well serve the whole kingdom.

The fourth is a total Eclipse of the Moon, nearly central, consequently very large, and of long continuance. This Eclipse, if the air prove favourable, may be seen by us in this kingdom, and not by us only, but also by the inhabitants of all the states and kingdoms in Asia, Africa, and Europe; for at the time of the middle of the Eclipse, the Moon is vertical to the eastern coast of the deserts of Arabia, which lies 60 deg. and a $\frac{1}{2}$ east of London; and in 20 deg. $\frac{3}{4}$ north lat. Whence it appears that this Eclipse will be visible to the western parts of New Holland; to all the isles of Sunda, Borneo, Malucca, and Philipiana, those of Japan, together with Greenland, Ireland, &c. But the Moon rises eclipsed in New Britain, Newfoundland, Cape Breton, and New Scotland in America. This Eclipse happens in the second degree of Gemini, on Thursday, the 23d of November; with us in Great Britain, it may be expected nearly to correspond with the following type and calculation, which is adapted to the Meridian of London, according to solar or apparent time:

M O O N.

P A R T R I D G E, 1779.

	London		York.		Edinb.		Evening.

			H.		M.		

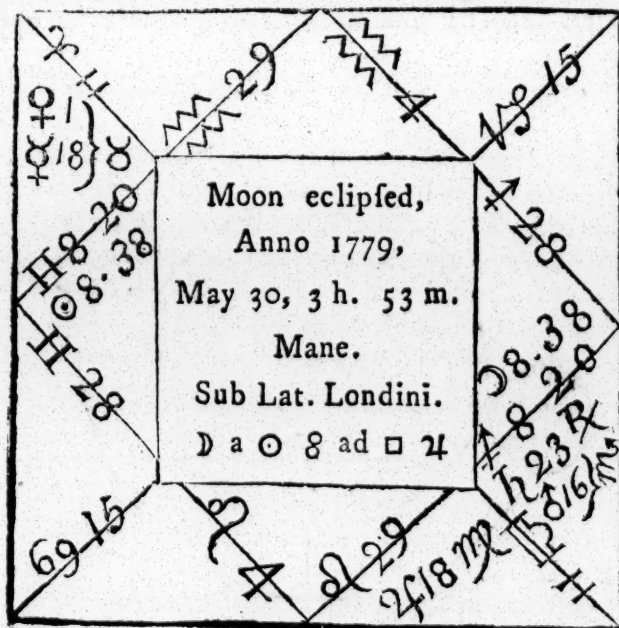

Duration in total darkness 1 . 41

Duration of whole Eclipse 3 . 40

Digits eclipsed 20 . 45

The fifth and last Eclipse is a Solar one, upon Tuesday, the 7th of December, at half past 10 at night, consequently invisible to us, and not to us only, but to all Europe. At the true conjunction of the Moon and Sun, the Moon has about 74 min. of south latitude, therefore the defect cannot be much any where.

Courteous readers, you may see I have given you the types of the visible Eclipses of the Luminaries; and that you may in some measure understand the astrological use thereof, I will erect a figure of Heaven for the first Lunar Eclipse at the time of the Moon's setting, as follows:

P A R T R I D G E, 1779.

Latitude.

h 2, 21 n.
 24 1, 23 n.
 ♂ 1, 10 f.
 ♀ 2, 2 f.
 ♄ 3, 50 f.
 ♃ 0, 39 f.

Declinations.

h 16, 10 f.
 24 6, 5 n.
 ♂ 17, 36
 ☉ 21, 53 n.
 ♀ 10, 50 n.
 ♄ 13, 36 n.
 ♃ 23, 55 f.

This Eclipse is only in part visible to us, yet is not to be robbed of it's effects; it happens you see in the 9th deg. of Sagittary, near to the Scorpion's heart, a violent fixed star of the nature of Mars and 24. It hath remarkable portents, and points out the death of some eminent famous female person; whether Empress, Queen or Dutcheß, I say not, nor take upon me to determine. Yet, this I mean to say, Sagittary is an easterly sign, and the last of the fiery trigon, which rules over the easterly part of the world; therefore the dangers this Eclipse principally portends, will happen eastwards. Proclus says double-bodied signs have signification of Kings and men, by reason of two-fold or double affection. Rex enim respectu subditorum, et subditi respectu regis dicuntur. A King in respect of his subjects, the subjects in regard of their King, as the Eclipse falls in the 7th house, gravia bella, pugnas ac seditiones vulgi suscitatur. It is known unto all, though but meanly versed in astrology, that Jupiter, who is lord of the place defective, governeth Persia, Hungaria and Spain, and the cities of Babylon and Cologn. Whether there may arise in Persia or Hungaria, any wars or hostility upon the influence of this Eclipse, 'ere it determine; or any breach of leagues or former alliances, time will discover.

Judicium Astrologicum for the Year 1779.

I Begin my judgment of the year 1779, from the ingress of the Sun into the tropical sign Capricorn, which happens on December the 21st, at 12 min past 4 in the afternoon, 1778, at which time the face of the Heaven in the meridian of London, is as followeth: Pisces 1 deg. culminating, and 5 deg. of Cancer ascending on the east; h in 23 deg. of m in the 6th; 24 in 27 deg. of m in the 4th;

P A R T R I D G E, 1779.

4th; ♂ in 19 deg. of ♊ in the 5th; the Moon and ♀ in the 8th; ☿ in the 7th; and the ☉ on the cusp; and the Moon is going from the body of ♀ and ♌ of ♈, to avoid of course, the most material aspects. Near this ingress are a square of the Sun and ♈, and another square of ♂ and ☿, which, together with some other minor aspects, will stir up quarrels and contentions amongst men of the superior rank or degree; especially in those countries, and those people subject to the signs Libra and Capricorn; and towards the latter end of the month there is celebrated a square of ♂ and ♀, which threatens females in general with diseases, and an eminent one with much sorrow if not death; and the diseases incident to the body of man, are all impediments in the right ear, teeth, and quartan agues, proceeding of cold, dry and melancholy distempers, leprosies, rheumes, consumptions, palsies, dropsies, the head and foot-gout, apoplexies and other diseases that are painful to be endured, and hard to be cured, which is all I shall say here as touching this quarter, referring you to the observations of January and February for the rest. Thus you may see that the Stars do incline, but not compel mens minds to good or evil, as was the opinion of Bardesanus, Priscillianus, Marcus and others, who looked no farther than secondary causes, and so concluded fatalibus Astris, and that men are enthralled to the Stars, and what wickedness they do commit, they are compelled to it by the influence of the planets. Now this is to bind the unlimited Jehovah under a necessity of destiny, and set the creature above the Creator; so that it is undeniable, but that men may be inclined, but not compelled to do good or evil by the influence of the Stars, which brings me to the next thing to be considered, which is the Sun's entrance into Aries, and begins

The SPRING QUARTER,

WHICH commenceth this year on March the 20th, at 53 minutes past 5 in the afternoon; at which time 29 degrees of Virgo doth ascend, and 29 deg. of Gemini culminates. In this figure we find the two infortunes conjoined in the 3d, in the latter end of ♍, and ♈ retrograde

P A R T R I D G E, 1779.

retrograde in the 12, in 21 deg. of ♊, ♀ in the 5th, in 14 deg. of ♋, ☿ on the cusp of the 7th, in 25 deg. of ♋, and the ☉ near setting in 0° 0' of ♋, and the ♃ in the 8th, in 3 deg. of ♋, separating from void of course, and applying to ☐ of ♀, and Δ ♃, and thus are the planets posited at this ingress; which giveth warning unto bad kings, princes and governors, both of external and internal designs against their government, and sometimes with success to the undertakers, but assured destruction to many of them. The angles of the ingress being of double-bodied signs, will, I fear, make my predictions true: Nay, kings and their allies will promise fair, but still with reservation of self-intentions, taking occasion or advantage when opportunity serves, for their own ends and purposes. The configurations of this quarter various, but mostly benevolent; the conjunction of the infortunes seems considerable, also the opposition of the Sun and Jupiter, with many other notable aspects as may be seen in the Ephemeris; and hence I judge it will be a very active season; great and superlative consultations are now on foot throughout Europe; amongst the rest some divisions too break out before the quarter terminates, or at least great danger thereof; and if so, no happy success may be expected; which brings me to consider

Of the SUMMER QUARTER,

WHICH beginneth when the Sun entereth into the first point of the tropical sign Cancer, which is the estival solstice making our longest days and shortest nights, which falls this year on Monday, June the 21st, at 3 minutes past 4 in the afternoon, when 28 deg. ♋ culminates, and 12 deg. of ♊ ascends, the two infortunes are in ♊ in the ascendant, ♃ in the 10th, ♀ in the 7th; the ☉ and ☿ in the 8th; and the ♃ in the 11th from the ☐ of the ☉, and applying to the Δ of ☿, which demonstrates great gain and profit to emerge unto all sorts of people, particularly in their particular ways, vocations and callings from their industry and honest endeavours used therein; viz. To the generous merchant by his liberal adventuring; &c. To the industrious farmer in ac-

tending

P A R T R I D G E, 1779.

tending his flocks and herds of cattle, &c. To the unwearied student by his books. To each common tradesman by his diligence in his profession according to it's kind. Unto all sorts of men, (I say) much happiness will ensue, and they will receive a proportional encouragement to the endeavours and industry they shall use; and there shall be more harmless mirth among men, less cheating, cozening, lying, trepanning, and fraudulent practices used amongst them than in many former years, wherein friendship hath proved a gin, and society a snare, neighbourhood treachery, and kindred and relations, armies of enemies. But, Tempora mutantur, &c.

OF THE AUTUMNAL OR HARVEST QUARTER,

WHICH this year beginneth when the Sun toucheth the first Scruple of Libra; it happeneth on Thursday, September 23, at 35 minutes past 5 mane, when 24 degrees of Gemini culminates, and 25 deg. of Virgo ascends; the ☿ separates from a ☐ of ♄, and applies to * of ♄, who is now removed out of ☿ his detriment, into the celestial ballance. The configurations of this are for the most part, benevolent, and therefore we may justly hope for the same harmony on earth as (during this quarter) is among the celestial wanderers in the Heavens: These influences are concomitant, and consequently cooperate with many precedent aspects, and many times puts forward or retards the operation or effects of the most potent congresses and complications of the beams of the planets; and as there are six planets under the earth, so it is a fit time for council and serious consultation; but mens minds are as uncertain as the season. The actions of men are various, and probably we may hear of the conventions of grand councils or meetings both in England and other countries, viz. amongst the German princes, and also the popish clergy in Italy; nor is the king of Spain, and his most Christian majesty negligent of their own interest, but very active, and consult with the wisest heads of their kingdoms concerning matters of very high and transcendent concernment. I should have given a scheme of Heaven for the total visible Lunar Eclipse, which happens

in this quarter, and my judgments thereupon, but the effects will not be apparent till the next year, 1780.

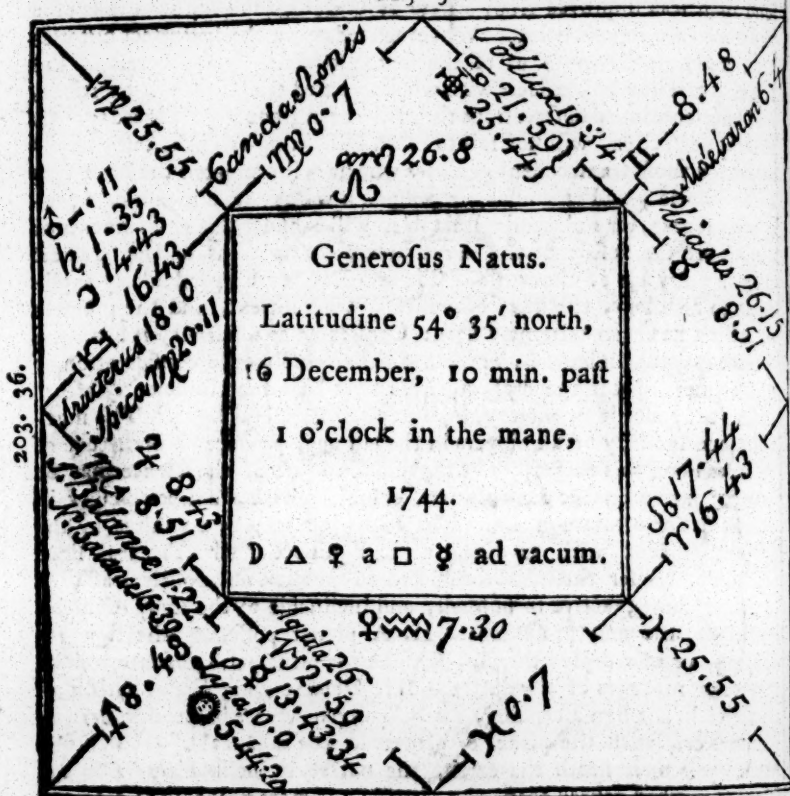

Those who have wrote for my opinion of genethlical astrology, will be pleased to accept of the following reply :

In early ages men of superior talents were happily employed in observing the order of nature, and in discovering truths useful to themselves and others : By slow degrees and repeated observations, the general laws of the natural world were investigated, the sciences were formed, and man was improved from a state of brutal ignorance, into that of a social and intelligent being. Whoever reads even the imperfect histories that are come down to us of the first discoveries and progress of the sciences ; whoever considers with what repeated trials, patient exertions, and long-continued observations they have been gradually advanced to their present perfection, will not fail to catch something of enthusiastic admiration for those transcendent geniuses who have illuminated the dark ages of the world ; and when they look upon a watch, an almanack, a geographical map, or a chronological table, will consider these instruments of science are the result of the accumulated observations of the greatest men in every age of the world. These reflections are particularly applicable to astrology, the study of which is very antient, and the progress of which has been extremely slow : Considered as a science, it has been subject to great difficulties, and may further employ the consideration of philosophers, yet it's general principles have been long sufficiently ascertained to render it an entertaining study, and a useful light. The ingenuity and industry of astrologers in the last age, produced a multitude of volumes upon this subject ; but the practical part of the science may be brought into a smaller compass, and exhibited with great perspicuity in aphorisms for a common use. The following may be consulted by the discreet student with advantage : I. Equinoctial or Tropical signs ascending, render the native addicted to publick and political affairs ; lovers of fame ; active in business, and inclinable to the study of many ingenious arts and professions.—II. A planet possessing the sign ascending, or intercepted therein, shall be the principal significator of the temper or manners of the native.—III. Observe what planet hath most dignities in the sign ascending, for he shall participate in the signification of manners, with the planet or planets in the ascendant.—IV. When Mercury is underneath the earth, the native is inclinable to arts and sciences ; when posited above the earth, he is more propense to oratory ; when in aspect with the Moon from ♀, ☿, or ☾, he inclines the native to the knowledge of divination, or fore-telling things to come.—V. The fixed Stars are also to be considered in forming a judgment of the manners and disposition of the native, for they augment or decrease them for evil or good according to their nature.—VI. If the native's significator of manners be with Spica ♄, he will be of an affable, humane and quiet temper ; diligent in study, and active in his concerns.—VII. When the Sun and Moon are with eminent fixed Stars, or with fortunate planets, and Jupiter or Venus near the cusp of the second house, the native shall thrive, and his prosperity come several ways, according to the signification of those planets.—VIII. The Lord of the tenth house in the ascendant ; or the Lord of the first in the tenth house ; or if there be

PARTRIDGE, 1779.

be any friendly agreement between the Lords of the ascendant and tenth, the native will be beloved of great persons, and by their means attain great honour and preferment—IX. When there shall be many planets evilly disposed in the twelfth house, the native will meet with many private and treacherous enemies; but when the Lord of the ascendant is angular, and the Lords of the seventh and twelfth houses are cadent; or if they are disposed of by the Lord of the ascendant, the native will certainly overcome both his public and private enemies.

This is a figure of the birth of a gentleman now residing in London: Having not room to consider the figure, I shall only deliver one known aphorism, viz. cardinal signs on the angles of a nativity, and some of the superiors placed therein, do certainly make men famous and prodigious in their generation; and so they do when posited in those signs, though not in angles, but not in such superlative manner.
